

Invoice receipt ledger cockpit / dashboard for transparency and control of your finance processes!

easy, affordable and safe

inPuncto[®]

How does the **invoice cockpit** for SAP® work?

- 1 When the SAP cockpit for invoices by inPuncto is started, all invoices in a process (new, in process, finished) are visualized, with one click.
- 2 The “filters” on the overall amount of invoices can be defined and the settings can be saved like favorites.
- 3 The cockpit for invoices possesses a direct link to “deeper” information / transactions in SAP (drill-down). If you double-click on an order number in the cockpit for example, you get to the order in SAP.
- 4 If for example urgent invoices have to be released via an ad-hoc absence, these can simply be allocated to a new member of staff.
- 5 People involved in the process can be reminded via e-mail directly out of the SAP-cockpit/dashboard.
- 6 There is the possibility to override the invoice processing “in the background” (no change possible in this mode) and visualize the current processing status.
- 7 And many more.

Your benefits regarding transparency and control through invoice receipt ledger with cockpit:

Faster

- Tremendously shortened reaction times – priority control, reminder, escalations.

Better

- Highest transparency and traceability of all invoice workflows.
- Efficient coordination and allocation of tasks.

Cheaper

- Increase of the cash discount received.
- Reduction of process costs.
