

Viewer for SAP®- Higher security - controllable from SAP!

The visualization of current image formats (PDF, TIFF, JPG, BMP) happens directly in your GUI.
How does the viewer for SAP work?

biz²Viewer can be used integrated in the SAP GUI, as well as in an additionally started Internet Explorer. It receives the image data directly from the archive-filing system via HTTP-protocol, this means the SAP-server is not encumbered by this communication.

Once started, you can use it to:

- browse between several files or within a multipage file
- rotate the file by 90°
- zoom in/zoom out
- define the print area
- print
- send a document to a mail recipient, etc.

inPuncto®

Your benefits regarding SAP viewer biz²Viewer:

Faster

- Special handling of large multipage images
- Direct jumping to page x.

Better

- Easiest operation with browsing in multipage documents, zooming, rotating,...
- Visualizing image documents in various formats (multipage-TIFF, JPEG, BMP, ...)
- Saving of documents in deviating formats
- Measuring function with calibration to e.g. measure drawings
- Scaled printing of documents, e.g. drawings, printing of document areas
- Mailing of the current document out of the biz²Viewer.

Cheaper

- No licensing in connection with the biz²Archiver on the client side
